**Answer: A**

### **NEW QUESTION: 3**

At a high level, which of the following options best describes the sequence of steps that one should take when setting up an IBM WebSphere Portal static cluster?

- A.** 1.Install WebSphere Portal on the first node, configure the database, and use the ConfigEngine tasks to create a profile template.  
2.Prepare the first node to communicate WebSphere Application Server Network Deployment, and use addNode and ConfigEngine tasks to configure the cluster and user registry.  
3.Install WebSphere Portal on additional nodes and use the profile template to configure.  
4.Use the addNode and ConfigEngine tasks to federate the additional nodes and complete the cluster setup.
- B.** 1.Use WebSphere Application Server Network Deployment to create a cell and managed node for each portal node in the cluster.  
2.Use the WebSphere Portal cluster profile template to install WebSphere Portal onto each node.  
3.Use the ConfigEngine tasks to configure the nodes to use the same database and user registry.  
4.Federate each of these nodes into the cluster by using the addNode and ConfigEngine tasks.
- C.** 1.Use WebSphere Application Server Network Deployment to create a managed node for

each portal node in the cluster.

2.Federate each of these nodes into the WebSphere Application Server Network Deployment cell using the addNode command.

3.Install and configure WebSphere Portal on each portal server node.

4.Use ConfigEngine tasks to configure the database, user registry, and create the cluster.

**D.** 1.Install and configure WebSphere Portal as a stand-alone node for each cluster node.

2.Federate each portal server node to the WebSphere Application Server Network Deployment cell using the addNode command.

3.Create a portal cluster using the ConfigEngine tasks.

4.Configure the cluster members to use the same database and user registry.

**Answer: A**
